

Sushil Harsana

SOFTWARE DEVELOPER · BACKEND & GENERATIVE AI

Dehradun, India | sushil23harsana@gmail.com | +91 91060 14404 | github.com/sushil23harsana | linkedin.com/in/sushil-harsana-2b604b258

SUMMARY

Product-minded software engineer who builds full-fledged, AI-native SaaS products end-to-end — owning backend architecture, distributed systems and the Generative-AI infrastructure behind them. Strong in Go and Python; experienced shipping high-throughput services, async pipelines and LLM/RAG-powered features to production.

TECHNICAL SKILLS

Languages	Go, Python, TypeScript / JavaScript, SQL
Backend & APIs	FastAPI, Django, Celery, Node.js, REST, microservices, RabbitMQ, rate limiting
AI & Data	Generative AI, LLM integration, RAG / retrieval pipelines, LangChain, prompt design
Databases	PostgreSQL, MySQL, MongoDB, Redis
Cloud & DevOps	AWS, Docker, Linux, Git, CI workflows, Next.js

EXPERIENCE

Altrd AI — Software Developer Apr 2026 – Present

- Designed and shipped an AI billing-reconciliation SaaS end-to-end (Python, Next.js): finance teams were reconciling invoices manually, line-by-line, over days. Built an AI discrepancy-detection engine that auto-classifies and flags mismatches — collapsing that effort from days of manual auditing to near-instant, explainable reconciliation.
- Built a real-estate lead-intelligence platform that replaced manual lead triage with an intelligent pipeline scoring inbound leads by health/intent, plus an AI voice agent that autonomously runs first-touch outreach and follow-ups — turning a manual sales-ops workflow into an automated engagement loop.
- Own both the product surface and the AI infrastructure behind it — retrieval pipelines, LLM / agent orchestration, and the backend services that serve them at scale.

Seller Setu — Software Engineer Oct 2025 – Mar 2026

- The seller platform's API gateway was buckling under high-traffic load on a Django stack. Re-architected the core gateway components to Golang, cutting p99 latency and unlocking concurrent request handling that kept the platform stable at peak.
- Hardened resilience with rate limiting and traffic control, and introduced RabbitMQ messaging for reliable communication across distributed microservices.
- Built and owned production Golang backend services and RESTful APIs — stronger validation, error handling and response consistency — deployed and managed on AWS.

Resollect — Software Engineer (SDE-1) Jun 2025 – Sep 2025

- Built a lawyer-operations platform where the client's case data sat behind a confidential server we couldn't connect to directly. Designed a webhook-based ingestion pipeline that securely pulled their data into the platform without direct server access — unblocking the entire integration the product depended on.
- Engineered asynchronous task processing with Django & Celery for background jobs and third-party integrations, keeping critical business workflows reliable.
- Diagnosed and resolved production incidents with robust error handling, improving system stability and reducing downtime.

PROJECTS

BitTorrent Client — Go Nov 2025 – Dec 2025

- Engineered a peer-to-peer file-sharing client from scratch — bencode parser, tracker protocol, and concurrent piece-based downloads with SHA-1 integrity verification using Go goroutines & channels.

Personal Finance Manager — GenAI Backend Mar 2025 – Jul 2025

- Built backend services generating insights from user data via GenAI-assisted retrieval; implemented LLM-backed summarization and insight workflows with FastAPI, focused on reliability and structured data handling.

EDUCATION

B.Tech, Computer Science 2021 – 2025
Graphic Era University, Dehradun · GPA 7.6 / 10

ACHIEVEMENTS

- Cluster Finalist, Tata Crucible Campus Quiz 2024 — India's largest business quiz (1.2 lakh+ student participants nationwide).
- Tech Team Lead, Designovation Hub — led technical operations and organized hackathons & tech events for 300+ students.
